

Marketing Campaign Performance Analysis

A comprehensive end-to-end analytics project examining campaign performance across brands, customer segments, and marketing channels — uncovering profitability drivers and growth opportunities.

EXCEL

MYSQL

TABLEAU

Project Workflow

Three phases transformed raw campaign data into actionable business intelligence.

Data Cleaning & Preprocessing

Excel-based standardization of records, dates, and categorical values, removing duplicates and preparing a structured dataset.

Data Analysis

SQL queries calculating ROAS, ROI, segment profitability, and channel effectiveness across 166,665 campaign records.

Data Visualization

Interactive Tableau dashboards monitoring KPIs, comparing brands, and identifying optimization opportunities.

Campaign Records

Brand & Campaign Type Performance

Brand Profitability

Profitability was evenly distributed across all three brands, reducing concentration risk.

Campaign Type Profitability

All five campaign types delivered strong, comparable results. Social Media led in ROAS; Paid Ads in ROI.

Customer Segment Analysis

Segment Insights

College Students emerged as the highest-value segment, closely followed by Youth and Working Women — all within a narrow ₹0.35B range.

Recommendation: Develop audience-specific campaigns rather than generic strategies. Segment-level targeting unlocks significantly higher returns.

Marketing Channel Performance

Channel Insights

Email delivered the highest overall profitability at ₹4.90B.

Instagram and **Facebook** remained highly effective acquisition channels.

Recommendation: Prioritize investment in Email, Instagram, and Facebook while optimizing weaker channel combinations.

Audience-Channel Opportunities

Performance is driven more by **audience-channel fit** than by channel performance alone. The highest-value combinations were:

Tier 2 City × Email

Strongest reach and conversion among value-conscious buyers.

Tier 2 City × Instagram

High engagement driving cost-effective acquisition.

Working Women × WhatsApp

Direct, high-intent channel with strong conversion rates.

Working Women × Instagram

Visual storytelling resonating with this segment.

High-Cost, Low-Return Campaigns

NEGATIVE PROFITABILITY

CAMPAIGNS WITH LOSSES. NEGATIVE NEGATIVE PROFIT.

HIGH ACQUISITION COST

CAMPAIGNS WITH POOR CONVERSION RATES.

POOR ROI

CAMPAIGNS BELOW THE 2.69 AVERAGE.

INEFFICIENT SPEND

CAMPAIGNS WITH NO MEASURABLE RETURN.

Where Budget Is Leaking

Multiple campaigns showed high acquisition costs, negative profitability, and poor ROI — with individual losses ranging from **₹2.41K to ₹7.82K**.

⚠ Action Required: Pause underperforming campaigns immediately and reallocate budget toward profitable audience-channel combinations.

Monthly Performance Trend

Stable Performance, One Notable Dip

Monthly profit averaged **₹7-8 billion** throughout the year. A significant dip in **June** is likely attributable to partial-month data rather than genuine underperformance.

Best Practice: Normalize monthly metrics using daily run-rate calculations before drawing performance conclusions.

Business Recommendations

Short-Term

1

- Pause negative-profit campaigns immediately
- Reduce spend on inefficient audience-channel combinations
- Increase budget allocation to top-performing campaigns

Medium-Term

2

- Implement audience-specific targeting strategies
- Optimize channel selection using segment-level insights
- Conduct controlled A/B testing across channels

Long-Term

3

- Develop predictive campaign performance models
- Build automated marketing monitoring dashboards
- Implement performance-based budget allocation frameworks
